

MICHIEL ROUKENS

Product Engineer & Full-Stack Developer

The Hague, Netherlands | +31 6 22040319 | hello@marejas.dev | Open to part-time, remote and hybrid opportunities
linkedin.com/in/michielroukens | github.com/arejasverduras | marejas.dev

PROFILE

Product Engineer and Full-Stack Developer building thoughtful, data-driven products with TypeScript, React, Next.js, Node.js and PostgreSQL. Work across product logic, UX, frontend, backend and deployment; integrate AI coding agents into a disciplined engineering workflow while retaining responsibility for architecture, correctness and maintainability. Former startup founder with strong product judgment, autonomy and a practical focus on real user workflows.

CORE EXPERTISE

Development: TypeScript, JavaScript, React, Next.js, Node.js, Express, SQL, HTML, CSS, Tailwind CSS

Full stack & product: Prisma, PostgreSQL/Supabase, REST APIs, authentication, relational data modeling, responsive UI, UX/UI, testing, debugging, Git/GitHub, OpenAI API integration, AI-output evaluation

SELECTED PROJECTS

Daily Recovery Coach — TBI recovery planning and activity coaching | 2025–present

Private working pre-release MVP | Next.js, React, TypeScript, Prisma, PostgreSQL, Supabase, OpenAI API | [Portfolio case study](#)

- Designed a comprehensive recovery system and relational domain model connecting activities, symptoms, personalized load profiles, phased plans, goals, missions and scenario-level progress.
- Built authenticated logging, progress and coaching workflows; deterministic application logic selects and evaluates user evidence while the OpenAI API synthesizes grounded daily guidance.
- Used the product extensively during recovery to adjust daily load, respond to setbacks, identify bottlenecks and structure graded exposure toward greater capacity.

MyPower — Full-stack calisthenics training platform | 2025–present

Independent project | Next.js, TypeScript, Prisma, PostgreSQL/Supabase, Tailwind CSS | [Portfolio case study](#) | [Live app](#)

- Designed and built a mobile-first platform for creating, organizing and sharing workouts and programs that other users can play through while tracking progress.
- Modeled complex training metadata and built an interactive workout player with circuits, rounds, timers, voice cues, authenticated CRUD flows, optimistic UI and responsive reusable components.

Silvester Zwemschool — Client website rebuild | 2022–2023

Next.js, TypeScript, Netlify CMS, Framer Motion | [Portfolio case study](#) | [Live demo](#)

- Rebuilt a content-heavy WordPress site in Next.js, increasing Lighthouse performance from 20 to 95%+ and reducing its longest page from roughly 6,000 elements to fewer than 800 without removing content.

EXPERIENCE

Independent Product Engineer & Full-Stack Developer | 2022–present | The Hague

- Design and build client and independent web products across product definition, UX, application logic, data modeling, implementation and deployment; review AI-assisted implementations for type safety, architecture, edge cases and maintainability.

TBI Recovery & Professional Re-entry | 2023–2025

- A traumatic brain injury interrupted my career in 2023. Through structured recovery, study and incremental development, I rebuilt cognitive work capacity and returned to active full-stack product work in 2025.

Earlier Product, Development & Growth Experience | 2010–2022

- Built websites and webshops as a freelance WordPress developer; founded accounting product mijnJohan.nl and action-sports startup OWNR; held growth roles at Camptoo and Yippie.

EDUCATION & LANGUAGES

Codecademy, 2020–present: Front-End Engineer Career Path completed; Full-Stack Engineer Career Path in progress, including the completed data structures and algorithms curriculum.

Creative Advertising — Willem de Kooning Academy, 2008–2010 | Languages: Dutch (native), English (professional), German and Spanish (conversational)
